# SYMPATHY
FOR DATA

Evolve beyond repetitive and laborious manual data analysis

Within data analysis, automation is the key to long-term success. Manually sifting through gigabytes of information is time intensive and inefficient, especially as data sets grow larger and larger. Luckily, there is a better way. Sympathy for Data provides key automation processes for importing, preparing, analyzing, and reporting your data. Our software works seamlessly with all of your existing database, network disk, and other subscription services. With a few simple clicks, you'll have access to effortless find/filter/sort tools, analysis, and automatically formatted reports.

Sympathy for Data is a software platform that simplifies the complex reality of large-scale data analysis.

KEY BENEFITS
▶No License Costs ▶Flexible and Extensible ▶Manages Complexity

CREATING DATA-SMART ORGANIZATIONS

Think of Sympathy for Data as the superglue connecting all of the enterprise data solutions crowding your desktop. Our software integrates SQL Server Integration Services, SharePoint, or any other resources you already use into a cohesive whole, maximizing ease of use. It's your new go-to application to help employees throughout your organization organize, analyze, and understand data – even those without a PhD in Informatics.

BIG DATA, SMALL DETAILS

We want you to be able to handle data from different sources and formats with ease. Connect to databases, select files from different network drives, or automatically perform analysis on thousands of Excel files all with a few clicks of your mouse. We've designed our platform to handle massive data sets without forgetting about the small details – metadata, individual results, and any custom data you need will always remain at the forefront.

SYMPATHY FOR DATA AND FOR YOU

We understand the complexities of managing large amounts of information. Our team at Combine is here to offer you support, customization, and complete solutions for every data task. Sympathy for Data is flexible enough to implement everything from small applications to enterprise-wide solutions in server environments. We'll work with you to ensure that our software is providing you exactly what you need.

TAKE A LOOK UNDER THE HOOD

• Cross platform support. Runs on Windows 7/8/10, Mac OSX, and Ubuntu Linux.
• Modules are written in Python2 or Matlab.
• Data storage is formatted in HDF5.
• Supports tables and custom data types.
• Easy to create custom configuration GUIs.
• Plugin importer/exporter architecture.
